

TCEP - Now available in a cGMP version

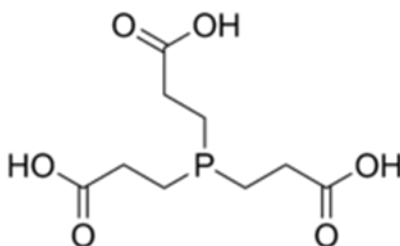

BioVectra Inc.

BioVectra's BioProcessing reagents are available in a range of purities and grades for use in Pharmaceutical manufacturing. We are currently adding to our offering with the introduction of cGMP versions of many of our key products.

TCEP has distinct advantages over many reducing agents, being odorless, a stronger, irreversible reducing agent and more soluble. It is more stable in air and does not reduce metals used in chromatography. Now, we have added the security and consistency of cGMP.

cGMP TCEP-HCl (cGMP Tris (2-carboxyethyl) phosphine, hydrochloride)

CAS number : 51805-45-9

Catalogue number 1301
